Project Activity Level Variance Check List

Project Name:	
Contract Number:	
Purchaser/Contractor Name:	
Request #, for period:	
Units/Subdivisions Affected:	

Location of operation:			
Slope Aspect Elevation			
Fuels on site			
Fuels in surrounding area			
10 day Forecast			
Short range predictions (Red Flags)			
Fuel Moistures			
Response time of suppression resources			
Potential for ignition RAWS location			
Current Fire Situation:			
Draw down information			
National Readiness Level			
Contractual considerations:			
Operating Season			
Frequency of recent contract fires in area			
Type of operation			

Project Activity Level Variance Check List

Purchaser/Contractors past performance			
Other site specific mitigation or precaution (i.e. Purchaser/Contractors			
proposals)			
Social & Community Considerations:			
Proximity of high value resources			
Sensitivity of location			
Remarks:			

I have considered the above items and have determined the following actions must be implemented to continue operations in Project Activity Levels ______ through EV

•		
•		
•		
•		
Fire Management Consulted		
Line Officer Concurred	Name	
	Name	
Contracting Officer or Delegated Representation	ive	
	Date:	
Purchaser/Contractor Rep	Date	

Project Activity Level Variance Check List

<u>Instructions for Determining Variances</u> for Continued Operations Within Specific <u>Units and With a Specific Time Frame</u>

- 1. Variances are in addition to the stated requirements for the Predicted Activity Level.
- 2. The Line Officer in consultation with the Forest Fire Management Officer or his/her representative will evaluate the items in the above check list as they relate to the existing and planned activities, add any mitigation measures as needed and the Line Officer will advise the Contracting Officer to execute the variance. The name of the Fire Management Representative and the Line Officer involved must be filled in but a signature is not required.
- 3. The delegated authority can be at the FSR/COR level since they would usually have more knowledge of the ground and access to the District Ranger.
- 4. The project area should be evaluated for differences in potential fire activity if a fire starts. This could necessitate the use of multiple forms. Examples of this would be units on a north slope near riparian areas vs. those on south slopes that would be dryer and expected to have more severe fire conditions or there is a significant difference from the predicted PAL and the actual conditions.
- 5. The Purchaser/Contractor or their representative should be consulted when determining types of variances that are being considered. They might be able to come up with other options.
- 6. Examples of written variances are:
 - A. Local assessment determines that existing precautions are adequate
 - B. Use of specialized detection equipment such as an infrared detection device for locating heat sources is required
 - C. Provide additional fire suppression resources (i.e. crews, equipment etc.) to achieve shorter response time.
