

## GPS-Enabled Map Installation for Smartphone or Tablet

**Background** – You can install a free mobile version of the Kaibab National Forest’s Motor Vehicle Use Maps (MVUMs) on your smartphone or tablet either using the QR codes below or going to the [Avenza PDF Maps](#) website and click on “Get Maps” then type “Kaibab National Forest” in the search box. [North Kaibab & South Kaibab “Visitor” Maps](#) are also available for a **fee** on the Avenza PDF Maps website.

**Note** – Even though the road designations depicted on the Visitor Map are identical to the road designations depicted on the current MVUMs, the Visitor Map is not the “official” MVUM. Therefore, the Visitor Map should be used as a supplement to the MVUM, not a substitute for it. The MVUM is the final authority should any discrepancies arise between the Visitor Map and the MVUM.

Avenza Maps is a mobile map app that allows you to download maps for offline use on iOS or Android smartphones or tablets. Use your device’s built-in GPS to track your location, plot locations, measure distance and area, etc.

**Get the App** – The [Avenza PDF Maps Mobile App](#) for your smartphone or tablet is available free from the Apple Store (iPhones and iPads), or from the Google Play Store (Android smartphones and tablets). Type “Avenza PDF Maps” into the app store’s search function to locate and install the app.

**Use the QR code scanner** – If your mobile device does not already have a QR code scanner, then download this application from either the Apple Store or Google Play Store. Additionally, the Avenza Map App has a QR code scanner built into it (click the + sign to find and use the scanner) for your convenience.

**Get the Maps** – Use the QR code scanner to scan the QR codes below to obtain any of the Kaibab National Forest **FREE** motor vehicle use maps for your mobile device. They can also be found in the Avenza Map App via the “store” button once the app is installed to your mobile device.

Follow the instructions from Avenza on how to use the app specifically if you want to use the tracking feature for your vehicle while driving in the forest. Once downloaded, these maps can be used offline if your GPS is turned on in your mobile device.

The app is a convenient feature to use for marking points of destinations and geo-referencing as well as tracking where your vehicle is in reference to the forest.
