

This developing plan content is under construction and is being shared as a snapshot of thinking. Additional changes based on Forest Service and public input are expected.

Forest-wide Air Plan Components

Background

This section has not been developed.

Desired Conditions

- Visitors to the Forest experience clean air and clear vistas, recognizing that air pollution sources within, and regional sources outside of the proclamation boundaries, affect the Forest.
- The Forests meet all National Ambient Air Quality Standards (NAAQS) designed to protect human health and public welfare. If any NAAQS are exceeded, Forest management activities are a minor contributor.
