*Further evaluation found that these species failed to meet one of two basic criteria for identifying SCC per FSH 1909.12, Chapter10, section, 12.52c. The related rationales for removal are labeled as: 1) insufficient evidence that the "...species is native to, and known to occur in, the plan area," and 2) failure to identify a "...substantial concern about the species' capability to persist over the long term in the plan area."
