

Forest Service Greater Sage-grouse Monitoring Annual Report
October 2015-September 2019

January 21, 2020

To: Director WFWRP

From: John Shivik, Special Assistant to the Regional Forester, Sage-grouse Coordinator

Date: January 6, 2020

Re: Annual Sage-grouse Report for Headquarters

Page 206 (in the Monitoring Appendix) of the 2015 Greater Sage-grouse Record of Decision for the Great Basin and page 132 of the Rocky Mountain Record of Decision state:

“These actions and authorizations, as well as progress toward completing and implementing activity-level plans, will be monitored consistently across all planning units and will be reported to BLM and Forest Service headquarters annually, with a summary report every 5 years, for the planning area.”

In order to fulfill the annual reporting requirement in the sage-grouse plans, I have compiled information about each item to be monitored (as detailed in the plans' Monitoring Appendix). I have also supplied additional information that will assist the Forest Service in assessing the effectiveness of sage-grouse plans through time. This report is based on current databases and information available at the time of writing. All data are provisional, and some figures may be revised in later years as more complete information is compiled.

Background

The Greater Sage-Grouse ROD Monitoring Appendix lists major items for monitoring during the implementation of the Amendment:

Implementation (Decision) Monitoring.

Habitat Monitoring.

Measure 1: Sagebrush Availability (percent of sagebrush per unit area)

Measure 2: Habitat Degradation (percent of human activity per unit area)

Measure 3: Energy and Mining Density (facilities and locations per unit area)

Population (Demographics) Monitoring.

Effectiveness Monitoring

Effectiveness Monitoring identifies various land agency contributions to habitat loss and calculates the trend of the above metrics over time by posing a series of additional questions:

Sagebrush Availability and Condition:

- What is the amount of sagebrush availability (existing vegetation) and the change in the amount and condition of sagebrush at large and mid to small scales?
- What is the existing amount of sagebrush on the landscape and the change in the amount relative to the pre-EuroAmerican historical, and potential, distribution of sagebrush (Biophysical potential)?
- What is the trend and condition of the indicators describing sagebrush characteristics important to sage-grouse?

Habitat Degradation and Intensity of Activities:

- What is the amount of habitat degradation and the change in that amount?
- What is the intensity of activities and the change in the intensity?
- What is the amount of reclaimed energy-related degradation and the change in the amount?
- What is the population estimation of sage-grouse and the change in the population estimation?
- How are the BLM and the Forest Service contributing to changes in the amount of sagebrush?
- How are the BLM and the Forest Service contributing to disturbance?
- Is the Amendment effective?
- Is this plan meeting the sage-grouse habitat objectives?
- Are sage-grouse areas within the LUP meeting, or making progress toward meeting, land health standards, including the Special Status Species/wildlife habitat standard?
- Is the plan meeting the disturbance objective(s) within sage-grouse areas?
- Are the sage-grouse populations within this plan boundary and within the sage-grouse areas increasing, stable, or declining?

To satisfy these monitoring requirements, Region 4, in collaboration with Regions 2 and 1, has collected required information from various sources, with particularly close cooperation with the BLM. The results follow in tabular form, referencing the above items. Additional, related information, when available, will be added within appendices to this document. This document will be updated annually and will build into a comprehensive report for the Fish and Wildlife Service review in 2020. Because of the on-going nature of projects and modifications of GIS and other databases, all figures in this report may be revised in future versions. For comments and corrections contact John Shivik (john.shivik@usda.gov).

Important Summary Tables

Table S1. Implementation Monitoring (from Table 1).

R4 FS Lands:	Total Unit Decisions	Decisions in PHMA, AMMA	Number (%) with added conditions#	Decisions in GHMA	Number (%) with added conditions#	Decisions in IHMA	Number (%) with added conditions#	Number of Mineral Exceptions	Number of decisions in MAs (% of total)	Number (%) consistent with plans
Ashley	42	11	9 (82)	1	0 (0)	0	0 (0)	0	12 (29)	12 (100)

11040304 - Jackson Ranger District	Teton to Snake Fuels Management Project	07/21/2017	- Fuels management	GHMA	Y	Although one burn unit partially falls within mapped GHMA - that area is mainly a mix of aspen and conifer interspersed with some sagebrush but is not mapped seasonal habitat (nesting or summer). Nearest mapped seasonal habitat is ~7 mi. NE of this area. As a wildlife design feature for sagebrush - Prescribed fire units that overlap sagebrush patches greater than 100 acres in size, will maintain a burn mosaic pattern (as much as possible), that converts less than 50% of the mature sagebrush in the unit-portion of the patch to early succession.

11040302 - Big Piney Ranger District	Final DN and FONSI for True Oil LLC - Lander Peak Area Exploratory Proposal	06/05/2018	- Minerals and Geology	PHMA GHMA	Y	Proposed Well Pad 23-15 is located approximately 530 feet within the outer delineated limits of designated PHMA. Construction would remove 0.18 acres of Mountain Big Sagebrush but the area would not provide nesting or brood-rearing habitat because 1) the habitat is unsuitable (the proposed well pad site is surrounded by Spruce/Subalpine coniferous forest), the closest occupied lek to the well pad is over 6.5 miles away and no sage-grouse activity has been reported in the Project Area. Disturbance Density is less than one pad per 640 acres and the DDCT evaluation area, totals 63.87 acres in disturbance, which would be much less than the 5% or 114.6 acres disturbance threshold.
11040304 - Jackson Ranger District	Final DN and FONSI Bridge Creek Land Exchange	06/15/2018	- Land ownership management	PHMA	Y	Land exchange resulted in a net-gain of 50.4 acres of priority connectivity habitat which will be added to the NFS.

Source Summary: Biologically Significant Units (BSU): Provided by each Plan/EIS between Nov 2015 - Apr 2019. Priority &

Important Habitat Management Areas (PHMA & IHMA): Provided by each Plan/EIS between 2015 - Apr 2019

For all areas where PHMA and/or BSU delineations changed via the 2019 Records of Decision, all previous year's data was reanalyzed using the updated information. All analyses performed with the following datum, coordinate system and projection:

Geographic Coordinate System: GCS_North_American_1983 Datum: D_North_American_1983 Projected Coordinate System: NAD_1983_Albers Projection: Albers

Table 6a. Population Monitoring (Item C)

Data collected and reported by state wildlife agencies. Contact individual states for additional information.

^{*}Total males on lek counts for habitat management areas in Idaho; Sage-grouse Population Triggers Analysis, Ann Moser, August 30, 2019

[^] Number of males counted, statewide summary. From Nevada Department of Wildlife, Nevada Sage-grouse Conservation project, Final Performance Report, September 2019

^{**} Estimated greater sage-grouse population in Montana; From Montana Fish, Wildlife, and Parks; Montana Greater Sage-grouse Population Report, September 3, 2019

^{^^} Total male grouse counted on strutting grounds

^{***} Wyoming male counts on leks (leks containing > 1male); Data supplied by Nyssa Whitford

Figure 6a. Male Lek Attendance trends, Idaho, 1996-2019.

Appendix B. Adaptive Management Annual Evaluations by state.
All Information supplied by state wildlife and/or state BLM offices

Colorado

Triggers Tripped

No triggers were reported to be surpassed 2015-2019.

Adaptive Management Response in Colorado:

For soft trigger responses, the FS would change management to be more restrictive or identify habitat improvement projects to address specific causal or limiting factors based on local knowledge and conditions.

For hard trigger responses, within 14 days of a hard trigger being tripped, the Northwest Colorado Greater Sage-Grouse Statewide Implementation Team will convene to develop an interim response strategy and initiate an assessment to determine the causal factor or factors.

Idaho

Analysis from Moser, Idaho Fish and Game, August 30, 2019:

Conservation Area/HMA	Total males on lek routes											Lambda (λ)			
	2011	2012	2013	2014	2015	2016	2017	2018	2019	Current 3-year avg ^a	% change from 2011 ^b	Route trigger tripped ^c	λ 2017 to 2019	90% confidence interval	λ trigger tripped ^c
Desert Priority	1713	1434	1526	1394	1346	1710	1412	1097	746	1085	-37%	Hard	0.618	0.543 - 0.693	Yes

Mountain Valleys Priority	1790	1716	1456	1603	1589	1663	1439	1165	874	1159	-35%	Hard	0.583	0.495 - 0.671	Yes
Mountain Valleys Important	336	290	317	334	390	432	370	306	203	293	-13%	Soft	0.514	0.413 - 0.616	Yes
Southern Priority	276	252	249	323	403	436	411	329	319	353	+28%	No	0.692	0.568 - 0.816	Yes
Southern Important	600	508	488	502	624	664	557	455	335	449	-25%	Hard	0.568	0.468 - 0.669	Yes
West Owyhee Priority ^d	548	453	398	456	680	948	793	532	426	584	+7%	No	0.487	0.433 - 0.540	Yes
West Owyhee Important ^d	145	147	129	110	157	160	142	85	80	102	-29%	Hard	0.525	0.479 - 0.571	Yes

^a Current 3-year average.

^b % change in current 3-year average from 2011 total.

^c For a population trigger to trip, both lek route and lambda must meet the trigger requirements.

^d 19 leks in the Browns Creek and Oreana area were reclassified from Priority to Important habitat in the 2019 BLM ARMPA.

Adaptive Management Response in Idaho:

For soft trigger responses, an interagency technical team would assess triggers and causal factors and identify potential management actions. For hard trigger responses, all PHMA management direction would be applied to IHMA within the same conservation area and the technical team could recommend additional activities to the appropriate agency line officer. A 2019 analysis has been created by Idaho Fish and Game, by Ann Moser.

Montana

No population or habitat triggers were hit in 2016 or 2017.

Adaptive Management Response in Montana:

NA

Nevada

TBD

Adaptive Management Response in Nevada:

Adaptive management response teams will identify appropriate management responses for each trigger and document them in a report. The team may identify management actions that may include season-specific fuels reductions and prioritizing areas for fuel breaks and vegetation treatments, as well as emergency closures and re-prioritizing vegetation treatments.

Utah

In 2019, all counts low, probably from natural cycle, but also largely due to limited observations and access issues.

The winter of 2018-2019 had above average snow pack that persisted later into the spring than normal. The persistent snow pack severely restricted human access to lekking locations, limiting the ability of personnel counting leks to reach lekking locations. As a result of limited access, many leks did not receive the minimum required number of visits during the protocol lekking period. Fewer visits reduces the probability of observing peak counts on each lek. Snow covering traditional lek sites during the lekking period can reduce the proportion of male greater sage-grouse attending leks and shift peak attendance to later in the year outside of protocol dates. The combination of a high proportion lek sites being inaccessible for all or a portion of the counting period and a lower portion of the Utah greater sage-grouse population attending leks resulted in a low bias in the results of the 2019 greater sage-grouse lek counts.

Summary of Utah Population Triggers 2015-2019.

Uinta:

No triggers hit 2015-2019; need to watch in 2020

Panguitch:

No triggers hit 2015-2019

Bald Hills:

No triggers hit 2015-2019; need to watch in 2020

Box Elder:

No triggers hit 2015-2019; need to watch in 2020

Vegetation soft trigger hit in 2018; fire

Carbon:

No triggers hit 2015-2019; need to watch in 2020

Rich:

No triggers hit 2015-2019

Parker:

Soft trigger hit in 2019; conclusion that low count and trigger hit is due to observer error and low counts in 2019.

Emery:

No triggers hit 2015-2019; need to watch in 2020; low population numbers in general

Sheeprocks:

Hard trigger hit in 2016; No triggers hit 2017-2019;

Strawberry:

No triggers hit 2015-2019;

Vegetation soft-trigger hit in 2018; fire

Hamlin Valley:

No triggers hit 2015-2019

Ibapah:

No triggers hit 2015-2019; strong upward trend

Summary of Utah Habitat Triggers

Utah habitat trigger analysis (cumulative 2016-2019) provided by BLM Utah office, habitat reduction due to wildfire.

Uinta:

No triggers met.

Panguitch:

No triggers met.

Bald Hills:

Soft trigger met.

Box Elder:

Soft trigger met.

Carbon:

No triggers met.

Rich:
No triggers met.

Parker:
No triggers met.

Emery:
No triggers met.

Sheeprocks:
No triggers met.

Strawberry:
Soft trigger met.

Hamlin Valley:
No triggers met.

Ibapah:
No triggers met.

Adaptive Management Response in Utah:

Soft Trigger responses will be to prioritize habitat improvement and restoration within PHMA where a trigger was tripped and may include extending seasonal restrictions on surface disturbing activities, temporary travel closures, and applying additional restrictions on discretionary activities.

Hard Trigger response will be to prioritize areas within and adjacent to PHMA for habitat restoration and fuels reduction.

Wyoming

Population Triggers

From Leslie Schreiber, Wyoming Game and Fish

In Wyoming, no triggers were tripped during 2016 and 2017. Technical Teams are being formed to evaluate causal factors for an outstanding soft trigger identified by the Northeast local working group in 2018, and another soft trigger identified by the Jackson local working group in 2019.

No Forest Service lands are associated with the Northeast trigger. However, the Gros Ventre valley (Bridger Teton NF) is associated with the Jackson Core Area and trigger.

Adaptive Management Response in Wyoming:

An Adaptive Management Working Group will consider causal factors and create a response strategy.

Appendix C. Fire Management in Sage-Grouse Habitats

Table 3-1 Cumulative acres of GRSG habitat burned from 2015-2019 by administrative agency¹, across eleven states².

ADMINISTRATIVE AGENCY	2019 GRSG Acres Burned	2018 GRSG Acres Burned	2017 GRSG Acres Burned	2016 GRSG Acres Burned	2015 GRSG Acres Burned	Cumulative Total
Bureau of Indian Affairs	39	53,132	26,792	30,239	0	110,202
Bureau of Land Management	176,586	1,081,035	1,182,871	342,450	366,751	3,149,693
Fish and Wildlife Service	26,999	31,532	1,448	0	200	60,179
Forest Service	44,604	235,029	102,987	14,008	16,121	412,749
National Park Service	789	2	219	1,956	0	2,966
Private Lands	26,833	500,065	651,154	180,017	156,779	1,514,848
State Lands	14,491	118,048	50,878	23,775	22,623	229,815
Other Federal Lands	172,817	81,070	57,510	33,823	260	345,480
TOTAL	463,158	2,099,913	2,073,859	626,268	562,734	5,825,932

Fire and Invasive Species Assessment (FS-FIAT)

The purpose of these assessments is designed to assess threats to greater sage-grouse and its habitat from Wildfire, Invasive Species, and Conifer Encroachment on each Forest in the Great Basin. The Intermountain Region was tasked to complete the assessment for each National Forest and Grassland within the Region in cooperation with Forest Staff. The FS-FIAT effort, undertaken in partnership between Region 4 and the Enterprise Program, began early in 2015. It was conducted by a team of specialists consisting of a Team Leader/Fuels Management Specialist, a Fire Ecologist, a Wildlife Biologist, a GIS/Range Management Specialist, and a Writer/Editor. The assessment development model consisted of the team visiting each Forest twice on average. These visits were to introduce the team, establish relationships, collect information, and then verify information to ensure that the data and information was truthed by the local unit. The team conducted a total of twelve assessments in total; ten in Region 4, one in Region 2, and one in Region 1: Ashley National Forest, Beaverhead-Deerlodge National Forest, Boise National Forest, Bridger-Teton National Forest, Caribou-Targhee

National Forest, Dixie National Forest, Fishlake National Forest, Humboldt-Toiyabe National Forest, Manti-La Sal National Forest, Salmon-Challis National Forest and the Sawtooth National Forest.
