Do Not Collect Fungi Species

The following are rare fungi on the Willamette National Forest. We ask that you do not collect any of these Regional Forester’s sensitive species. If you do collect them by accident, we request that you please contact the Forest Botany Program Manager (Thomas.McGinnis@usda.gov) and send him pictures of the mushroom sliced in half to show the outside and inside (including staining if present) to aid in identification. Please include a description and/or coordinates of where you found the species so we can document and protect the site.

Scientific Name
Albatrellus avellaneus
Bryoglossum gracile
Choiromyces venosus
Cortinarius barlowensis
Gastroboletus vividus
Gymnomyces fragrans
Helvella crassitunicata
Hydropus marginellus
Mythicomyces corneipes
Phaeoclavulina abietina
Rhizopogon alexsmithii
Rhizopogon clavitisporus
Rhizopogon exiguus
Rhizopogon inquinatus
Russula idahoense
Sarcodon fuscoindicus
Stagnicola perplexa

We also manage rare old growth- associated species, called survey and manage species. These should also not be collected:

Scientific Name
Albatrellus ellisii
Alpova alexsmithii
Arcangeliella camphorata
Asterophora lycoperdoides
Boletus pulcherrimus
Bridgeoporus nobilissimus
Catathelasma ventricosa

Chalciporus piperatus
Choiromyces alveolatus
Choiromyces venosus
Chroogomphus loculatus
Chrysomphalina grossula
Clavariadelphus ligula
