

AD-F Exception Position

Airtanker Retardant Loader: This position requires skills learned through specific training and experience and must interpret instructions given by the Airtanker Base Manger and Ramp Manager. This position works independently to determine the type of loading method used on the Airtanker being loaded, communicates with the Mixmaster and Airtanker pilot on the amount of retardant to load into the Airtanker and directs the Mixmaster to stop pumping retardant when the Airtanker tank is full.
