

HELP STOP THE SPREAD OF INVASIVE PESTS & DISEASES.

Our forests are threatened by nonnative insects and diseases that can kill large numbers of trees. Goldspotted oak borer, Sudden Oak Death, pitch canker, Emerald ash borer, and Asian longhorned beetle can be transported long distances on firewood. Once transported to new areas, these insects and diseases can become established and kill trees.

HOW YOU CAN HELP:

- Leave firewood at home—do not transport it to campgrounds or parks.
- Use firewood from local sources.
- Bring only what you'll need, and burn responsibly.

BUY IT WHERE YOU BURN IT.
