

**INTRODUCTION**

This appendix contains a map of the designated utility corridors on the Boise National Forest. These designated utility corridors relate to Forest-wide Standard LSST09, and are described in Management Areas 1, 4, 16, 17, 19, 20, and 21. They are presented here so that Forest personnel can see where these corridors occur on the Forest and adjust their management activities as needed. Larger-scale maps of the corridors are available in the Forest Plan Revision Project Record.
