Tips on Using Midewin's GPS Coordinates:

If the GPS positions supplied by Midewin seem wrong, you need to change one or more of the settings on your GPS unit. There are two settings that must be correct or the directions your GPS unit is giving you will be off by as much as a few miles. These settings are usually found under the main menu of most GPS units. Look for the "settings" option then the "units" option. The position format must be in the "decimal degrees" format (sometimes represented by "hddd.ddddd"). The map datum must be set to "NAD83". For more information on how to change these settings on your GPS unit, please consult your owner's manual.

Required GPS Settings: Position format = decimal degrees
Map datum = "NAD83"
