

AMERICA'S CROSSROADS

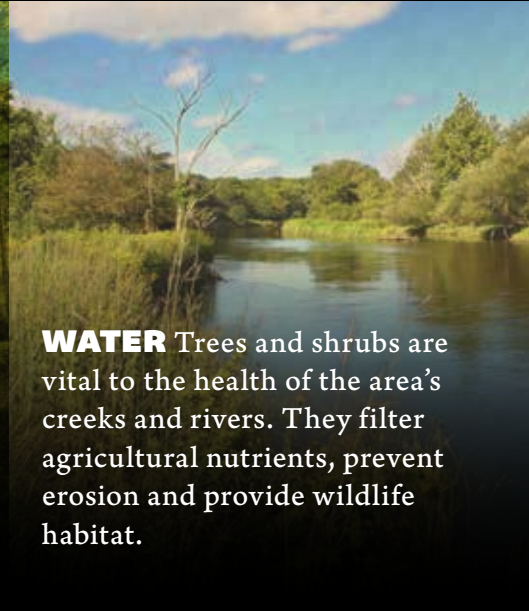

America's Midwest is as diverse as its land use. It's where industry and agriculture drive much of our country's economy. But when it comes to wildlife and wild places, this region is in need of heavy restoration. Join us as we work together to **REBUILD OUR HEARTLAND HOME.**

N A T I O N A L W I L D T U R K E Y F E D E R A T I O N

FORESTS Lack of proper forest management has led to an abundance of over-mature oaks and too little new growth that is essential for wildlife. And invasive species such as honeysuckle and buckthorn are taking over Midwestern forests.

WATER Trees and shrubs are vital to the health of the area's creeks and rivers. They filter agricultural nutrients, prevent erosion and provide wildlife habitat.

GRASSLANDS Less than 1 percent of our country's native tall grass prairies are still intact. We must be proactive to restore and enhance these remaining areas for the benefit of wildlife.

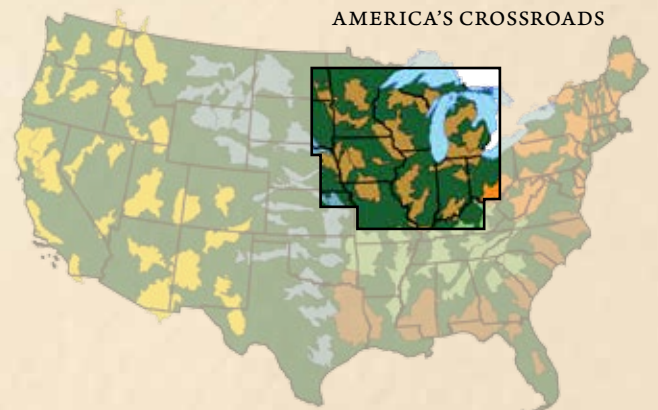

THE NWTF WILL REBUILD OUR HEARTLAND HOME

- **Our volunteers, wildlife biologists, foresters and partners** have joined forces to actively manage forests and grasslands for the betterment of wildlife and the people who enjoy them. Habitat management such as thinning forests and controlled burns will keep them healthy.
- **We'll will work** with farmers to continue sustainable farming practices that enhance wildlife habitat and protect water resources.
