

AMERICA'S GREAT OPEN SPACES

It's where the storied amber waves of grain ripple from the winds of the Western Plains. Where bluebonnets dot Texas Hill Country. Where aspens gently sway on mountainsides. It's these spaces where wildlife and the people who enjoy them are meant to roam. We have a plan to **MAKE THE GREAT PLAINS GREAT AGAIN.**

N A T I O N A L W I L D T U R K E Y F E D E R A T I O N

WATER corridors are suffering from an influx of invasive species. Salt cedar and Russian olives are choking out trees like cottonwoods that are markers for healthy waterways.

NATIVE PRAIRIES also are being overtaken by unwelcome plant species. Pair that with unmanaged grazing and cropland conversion and the world's last remaining tall grass prairies could fade into history.

FORESTS that stand tall above the American West are losing diversity, which means we're losing quality habitat for wildlife. We're battling invasive species such as honeysuckle and garlic mustard that are pushing out plants that keep our forests healthy.

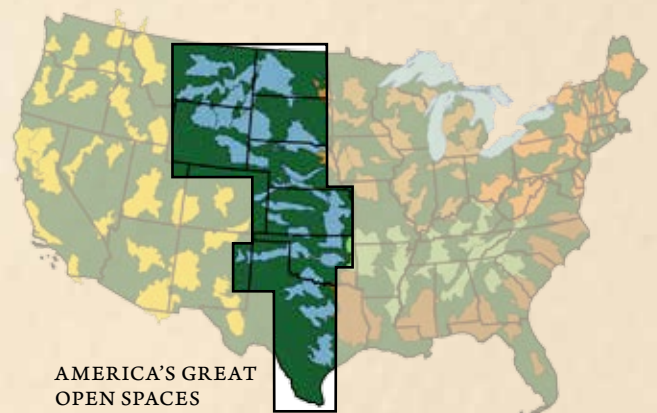

THE NWTf WILL MAKE THE GREAT PLAINS GREAT AGAIN

- **Our volunteers, wildlife biologists, foresters and partners** have joined forces to actively manage forests and prairies for the betterment of western wildlife. Thinning and controlled burning forests will keep them healthy and diverse.
- **We'll fight** the war against invasive plants and replace them with useful native species like cottonwoods, restoring healthier waterways for everyone.
- **We'll help balance land use** to keep it productive for farming but still valuable for wild species.
