

# Interagency Regional Monitoring Program

## Watershed Monitoring

# Watershed Condition Under the Northwest Forest Plan: Changes by Land-Use Allocation

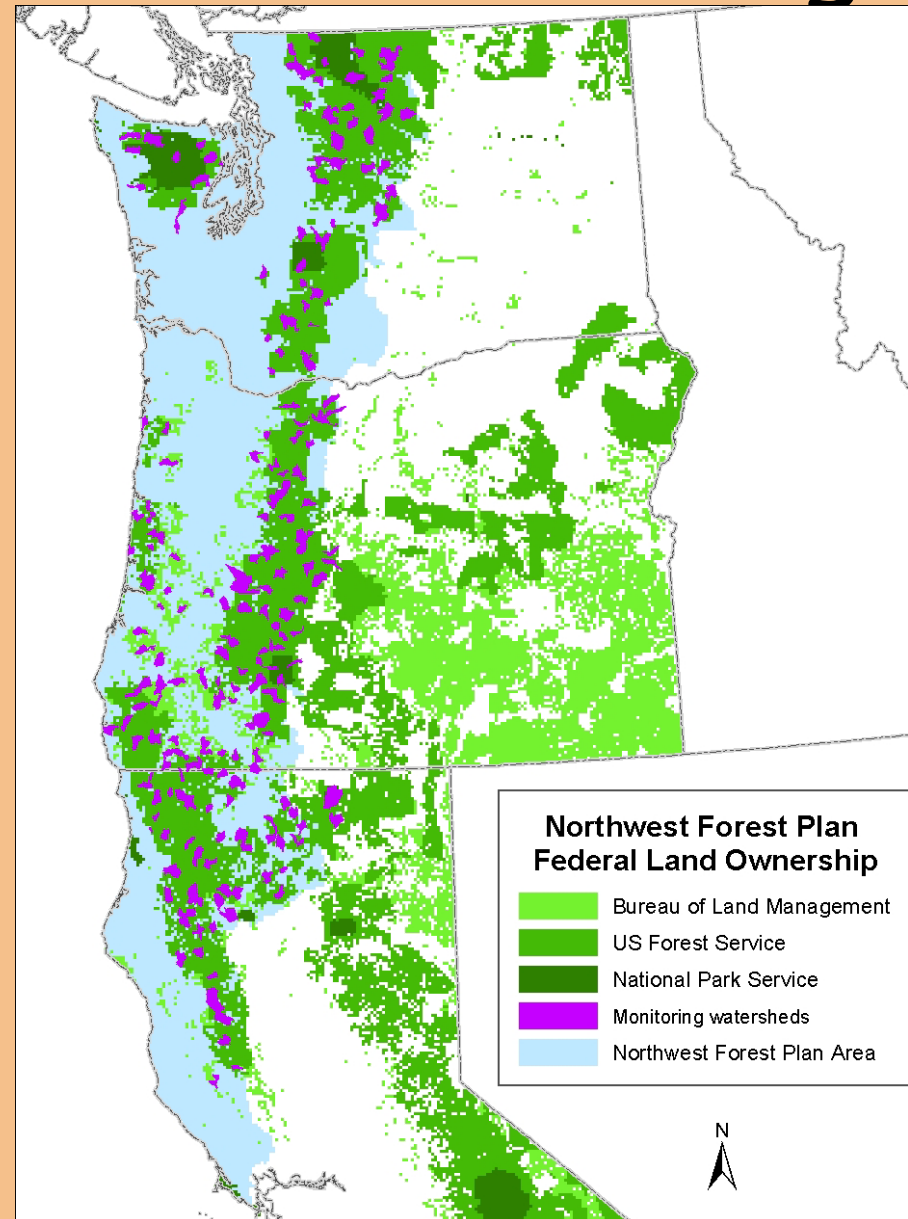

**Kirsten Gallo, Steven H. Lanigan, Peter Eldred, Sean N. Gordon, and Chris Moyer**

Bureau of Land Management - Oregon State Office

USDA Forest Service - Region 6

# Watershed condition monitoring

- ✦ 250 randomly selected watersheds
- ✦ 50 watersheds sampled per year on 5-year rotation
- ✦ Post-stratified watersheds into LUAs depending on > 50 % of the watershed area

# Field data collected

Available for 55 watersheds in current time period only

## Channel morphology

Bankfull width: depth,  
sinuosity, gradient  
entrenchment ratio

## Habitat characteristics

Wood and pool frequency,  
residual pool depth,  
substrate

## Biological characteristics

Fish, amphibians, benthic  
invertebrates, periphyton

# Land-use allocations

Category	N	Land-use allocation
Matrix	37	Matrix + Riparian Reserves
Congressional reserves	56	Congressional reserves Administratively withdrawn areas
Late-successional reserves	64	Late-successional reserve 1 Late-successional reserve 2 Late-successional reserve 3 Managed late-successional reserves Adaptive management reserves
<i>Nonfederal</i>	41	None

# Management in land-use allocations

---

Category	Management
Congressional reserves	National parks and wilderness
Late-successional reserves	Protect and enhance late-successional and old-growth forest
Matrix	Timber production

---

Upslope

# Step 1. Evaluation attributes

# Aquatic Conservation Strategy

- ✦ Goal is to maintain or improve the condition of watersheds.
- ✦ Does not describe the baseline distribution nor identify a "desired" distribution.
- ✦ We infer that the distribution should move toward improved condition.

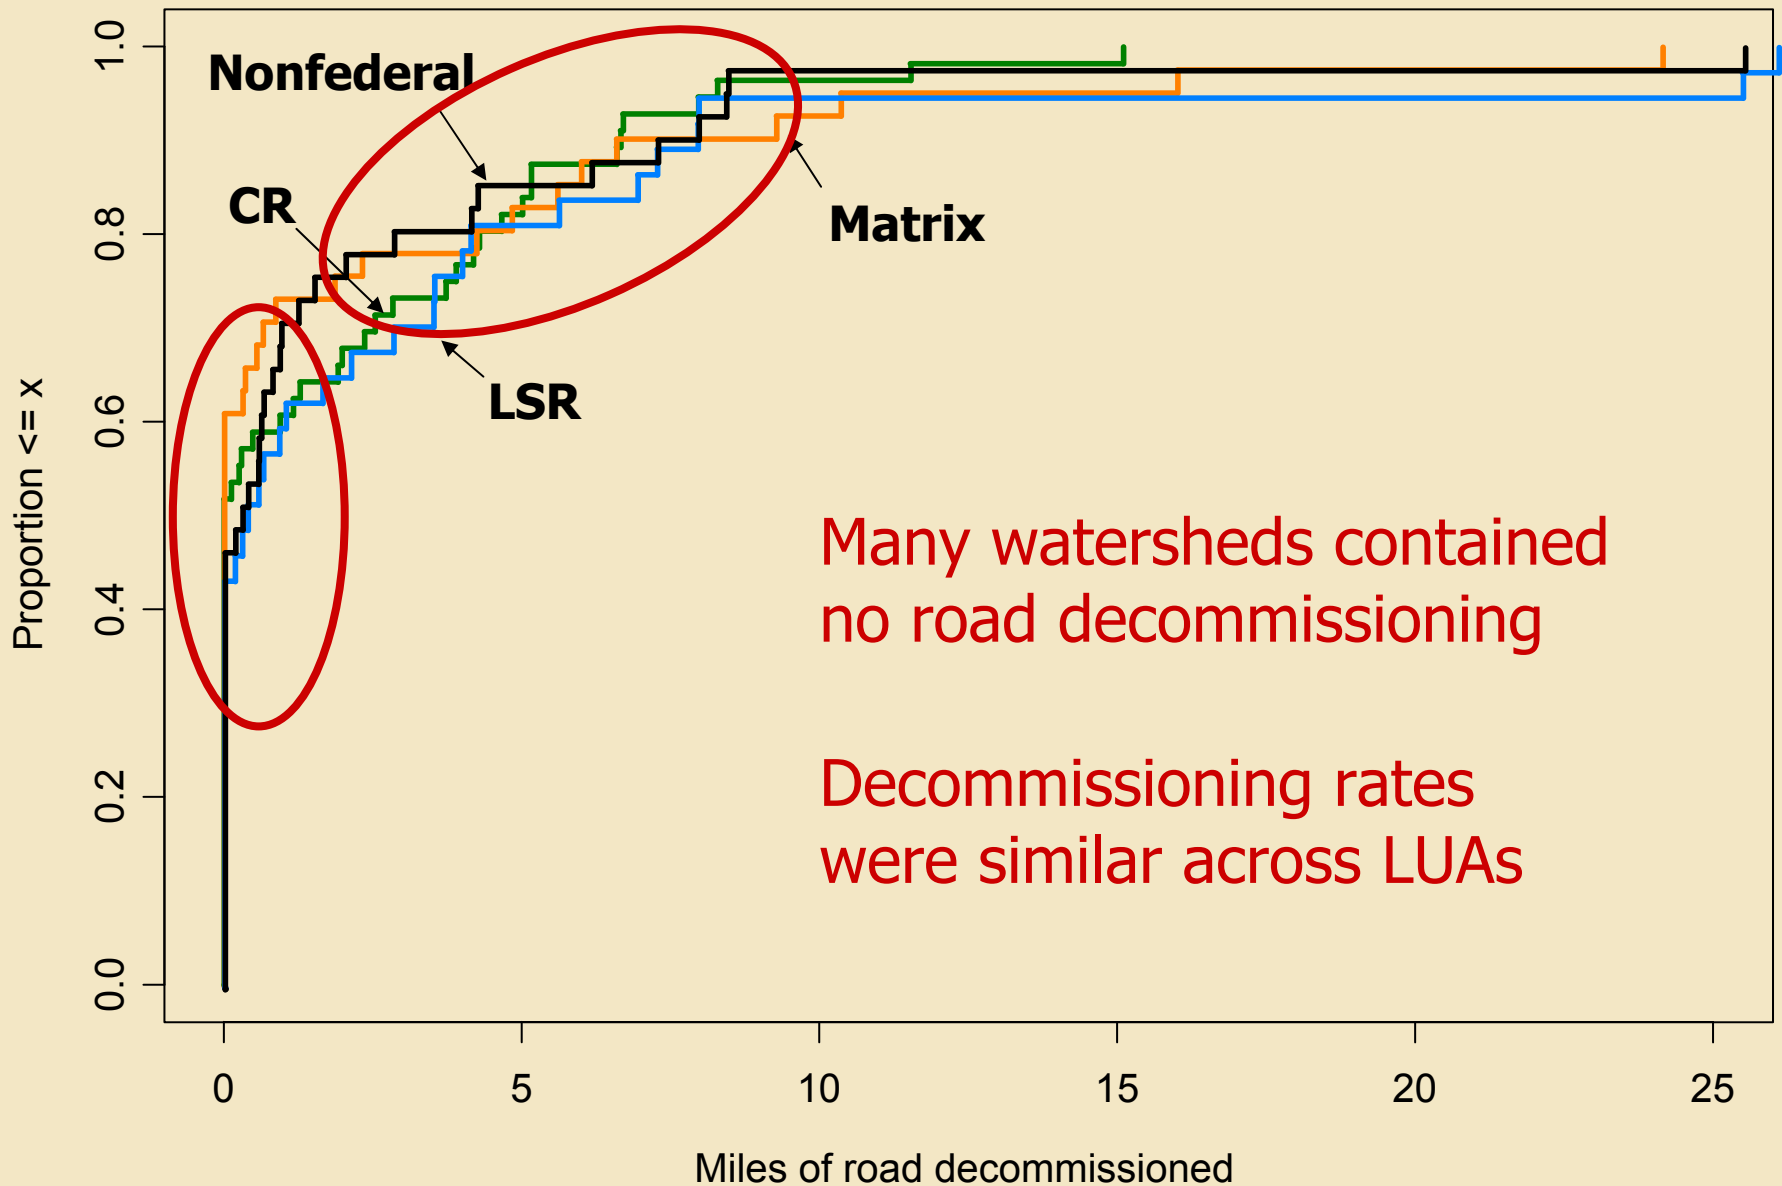

# Combined road and vegetation condition

# Relationship between condition and federal management

# Roads miles decommissioned

# Changes in road condition scores

	Decline	No change	Improve
CR	0	76	23
LSR	0	52	48
Matrix	0	66	33
Nonfederal	0	64	36

# Acres harvested

# Changes in vegetation condition scores

	Decrease	No change	Increase
CR	3	31	63
LSR	8	21	72
Matrix	0	49	51
Nonfederal	0	73	26

# Conclusions

- ✦ Few watersheds declined in condition in any land-use allocation.
- ✦ Watersheds under federal management tend to have higher condition scores than those not under federal management.
- ✦ Road conditions improved the most in late-successional reserves, the least in congressional reserves.
- ✦ Vegetation conditions improved the most in congressional and late-successional reserves.
