

# Status and Trend of Marbled Murrelet Population

# At-sea Monitoring of Marbled Murrelet Population Status and Trend in the Northwest Forest Plan Area

---

**Sherri L. Miller, C. John Ralph, and Jim Baldwin,**  
Pacific Southwest Research Station

**Martin G. Raphael,** Pacific Northwest Research Station

**Craig Strong,** Crescent Coastal Research

**Christopher W. Thompson,** University of Washington,  
School of Aquatic & Fishery Sciences,

**Mark H. Huff and Gary A. Falxa,**  
U.S. Fish and Wildlife Service

# **Marbled Murrelet Effectiveness Monitoring**

## **At Sea Population Monitoring OBJECTIVE**

---

**Monitor changes in  
Marbled Murrelet abundance  
offshore of the Northwest Forest Plan Area  
using a unified and scientifically valid  
sampling design**

# Overview

---

- **Population estimates offshore Northwest Forest Plan area**

**18,000 – 23,700**

**Marbled Murrelets**

- **We did not detect a decline over these sampling years**

# Sampling Design Development

---

- **Assembled a team with sampling, monitoring & murrelet biology expertise**
- **Gathered and examined existing data**
- **Defined our target population**
- **Used computer simulations to evaluate various design options**
- **Implemented surveys and tested results**

# Target Population

---

- **Washington, Oregon, and No. California**
  - **Offshore of Northwest Forest Plan Area**
- **Season: Breeding May 15 – July 31**
- **Nearshore: Within 8 km of shore**

# Primary Sampling Units (PSUs)

---

- Random selection of PSUs
- Effort varied by stratum

# Primary Sampling Unit (PSU)

- ~12.5 mi (20 km) of coast
- 0.062 mi (100m) to 5 mi (8km) from shore
  - Differs by zone and stratum
- 2 Subunits –
  - Inshore and Offshore
  - Centerline varies by zone
  - Centerline and effort determined by murrelet density and subunit area

# Survey Effort for All Zones

---

<b>Year</b>	<b>Number of PSU Surveys</b>	<b>Survey Effort (mi)</b>	<b>Number of Birds Observed</b>
<b>2000</b>	<b>176</b>	<b>3,504</b>	<b>2,896</b>
<b>2001</b>	<b>186</b>	<b>3,907</b>	<b>3,880</b>
<b>2002</b>	<b>200</b>	<b>4,044</b>	<b>4,616</b>
<b>2003</b>	<b>195</b>	<b>4,127</b>	<b>5,791</b>
<b>Totals</b>	<b>757</b>	<b>15,582</b>	<b>17,183</b>

# Density Estimate

---

- Average daily number of birds per square mile for the target population:

$$\hat{d} = 1000 \cdot \hat{f}(0) \cdot \hat{E}(s) \cdot ER / 2$$

- Bootstrap resampling methods were used to estimate precision

# Results

# Detecting Trends with 80% Power

Annual Decrease Rate (%)	Zone					
	All	1	2	3	4	5
	YEARS					
3	10	16	8	10	12	39
5	7	12	6	7	9	28
10	5	8	5	5	6	18

# Summary

---

- We have developed and tested a scientifically valid sampling design
- We estimate the Marbled Murrelet population offshore of the Northwest Forest Plan Area to be  
**18,000 – 23,700**
- We estimate we can detect a 5% annual decrease in the population of all Zones, in 7 years

# Summary (Cont)

---

- **Over the next few years, we will be able to refine both our density estimates and our power to detect changes in the population**
- **As the Effectiveness Monitoring effort continues, the consequences of errors in estimating trends should be evaluated and goals established. In addition to setting population targets, management response to observed trends should be considered**
