CFLR Project: <u>Accelerating Longleaf Restoration</u>

National Forest(s): Florida-Osceola

Responses to the prompts on this annual report should be typed directly into this template:

1. Designation of matching funds. Due to the fact that the system for recording matching funds in FFIS was new last year and not all matching funds were coded properly, we are asking for a re-tallying of FY10 matching funds in addition to FY11 matching funds. Since these numbers will be used as the matching funds totals for FY10 and FY11 going forward, there is a signature block for the Forest Supervisor (or Forest Supervisors if the project spans more than one national forest).

FY10 Matching Funds Documentation

Fund Source	Total Funds Expended in Fiscal Year 2010(\$)
CFLR Funds Expended (this is different than the amount allocated) ¹	\$1,001,312
FS Matching Funds	
(please include a new row for each BLI) ²	
WFM-0805-13M Osceola Deep Creek Comm. Protection	\$665,113
(WRHR)

CFKV10	\$69,167
CFRT10	\$25,992
CFVW10	\$22,121
CFW310	\$134,541
CFWF10	\$2,409
Funds contributed through agreements ³	\$372,000 (Tall Timbers Research)
Partner In-Kind Contributions ⁴	\$195,960 (Tall Timbers Research)
Service work accomplishment through goods-for services	\$0
funding within a stewardship contract ⁵	

¹ This amount should match the amount of CFLR/CFLN dollars obligated in the PAS report titled CFLR Job Code Listing and Expenditure Report – Detailed Analysis by Fiscal Year.

This amount should match the amount of matching funds obligated in the PAS report titled CFLR Job Code Listing and Expenditure Report – Detailed Analysis by Fiscal Year. For FY10, this column should also include matching funds not in the PAS report. For FY11, all Forest Service matching funds should be documented in the PAS report.

³ Please document any partner contributions to implementation and monitoring of the CFLR project through an agreement (this should only include funds that weren't already captured through the PAS job code structure for CFLR matching funds). Please list the partner organizations involved in the agreement.

⁴ Total partner in-kind contributions for implementation and monitoring of a CFLR project. Please list the partner organizations that provided in-kind contributions. See "Annual Report instructions" for instructions on how to document in-kind contributions.

⁵ This should be the amount in the "stewardship credits charged" column at the end of the fiscal year in the TSA report TSA90R-01.

3. FY 2011 Jobs Created/Maintained (FY11 CFLR/CFLN funding only):

Type of projects	Direct part and full- time jobs	Total part and full-time jobs	Direct Labor Income	Total Labor Income ⁷
Commercial Forest Product Activities	15.1	27.4	\$654,551	\$1,137,421
Other Project Activities	28.6	32.1	\$714,868	\$839,496
TOTALS:	43.7	59.5	\$1,369,419	\$1,976,917

FY 2011 Jobs Created/Maintained (FY11 CFLR/CFLN and matching funding):

Type of projects	Direct part and full- time jobs	Total part and full-time jobs	Direct Labor Income	Total Labor Income ⁸
Commercial Forest Product Activities	20.6	37.4	\$893,981	\$1,553,481
Other Project Activities	39.0	43.8	\$973,6 72	\$1,143,420
TOTALS:	59.6	81.2	\$1,867,653	\$2,696,901

⁷ Values obtained from Treatment for Restoration Economic Analysis Tool (TREAT) spreadsheet, "Impacts-Jobs and Income" tab. Spreadsheet and directions available at http://www.fs.fed.us/restoration/CFLR/submittingproposals.shtml#tools.

⁸ Values obtained from Treatment for Restoration Economic Analysis Tool (TREAT) spreadsheet, "Impacts-Jobs and Income" tab. Spreadsheet and directions available at http://www.fs.fed.us/restoration/CFLR/submittingproposals.shtml#tools.

4. Describe other community benefits achieved and the methods used to gather information about these benefits (Please limit answer to two pages).

In addition to the above economic impacts, CFLR related projects classified as "FS Implementation and Monitoring" in TREAT have created/maintained 44.6 jobs and provided \$1,116,762 in to the north Florida economy (TREAT 2011). Contracts were awarded to small corporations within the commuting area. Challenge Cost Share Agreements were established with The Nature Conservancy (TNC) of Florida and Florida Natural Areas Inventory (FNAI) providing direct benefit of \$30,000, and \$15,000, respectively. Silviculture treatments have doubled harvest targets adding work to local wood markets. Local vendors have acknowledged an increase in business from aforementioned activities.

5. Describe the multiparty monitoring, evaluation, and accountability process (please limit answer to two pages).

A suite of ecological and biological data is being collected from randomly selected plots to monitor this project's effectiveness. Additionally, the succession of vegetation treatments and their efficacy will also be monitored to supply the Forest as well as adjacent State, Federal, and private landowners a shared knowledge of the most efficient and effective strategies to restore and maintain a longleaf pine ecosystem. While the majority of monitoring is being conducted by Tall Timbers Research Station and Land Conservancy (TTRS), the Conserved Forest Ecosystem Outreach and Research (CFEOR) collaborative is also measuring efficacy of treatments.

6. FY 2011 accomplishments

7. FY 2011 accomplishment narrative (summarize key accomplishments and evaluate project progress) (please limit answer to three pages).

The following goals were identified in our proposal:

- Increasing Prescribed Fire Acreage
- Reducing Hazardous Fuel Loads
- Thinning Small Diameter Trees
- **Harvesting Woody Biomass**
- **Groundcover Restoration**
- Decommissioning Trails and Roads/Hydrological Restoration

The below chart summarizes 2010 accomplishments as reported in the 2010 Annual CFLRP Report:

Ecological restoration treatment (Performance Measure Code)	Unit of measurement	Total Units Accomplished ¹¹	Total Units Completed ¹²	Range of Costs per Unit	Average Cost per Unit	Funds Utilized to Accomplish Treatment (\$)	Type of Funds (CFLR, Specific FS BLI, Partner Match) ¹³

2011:

Prescribed fire acreage was accomplished by both human and natural source ignition allowing for a total of 34,563 acres of treatment. An additional 10,232 acres of hazardous fuel treatment occurred via mechanical treatments such as mastication, mowing, roller chopping, thinning, and fire line construction/maintenance.

Mowing and roller chopping not only reduce saw palmetto fuels but they also promote herbaceous groundcover restoration. This activity occurred on 3,267 of the aforementioned 10,232 acres. Decommissioned roads for 2011 met

¹¹ Units Accomplished should reflect the number of units designated through awarded contracts or force account implementation in

¹² Units Completed should reflect work actually done on the ground.

¹³ Please use a new line for each type of fund used. For example, you may have three lines with the same performance measure, but the type of funding might be two different BLIs and CFLR.

our target of 16 miles. No biomass production was proposed for the 2011 period. TTRS provided independent monitoring on 112,000-acres. Site preparation for mechanical planting was determined not to be an appropriate accomplishment in performance measure FOR-VEG-EST therefore; the 2600-acres were not included in the 2011 Accomplishment table but are reported here in the narrative.

8. Describe the total acres treated in the course of the CFLR project (cumulative footprint acres; not a cumulative total of performance accomplishments). What was the total number of acres treated?¹⁴

Fiscal Year	Total number of acres treated (treatment footprint)	
FY10	54,753	
FY10 and FY11	96,000	

9. Describe other relevant fire management activities within the project area (hazardous fuel treatments are already documented in Question #6): Prescribed fire management activities during the 2011 fiscal year were hindered due to drought conditions beginning in April and lasting throughout the summer. This prolonged drought, coupled with lightning storms common to Florida during spring and summer months, resulted in an active wildfire season. Some of these wildfires did result in a desirable outcome by reducing fuel loads and changing the ecological condition of the areas in which they occurred.

Expenses in wildfire preparedness were \$119,218 per 234,995 acres of the project area on the Osceola National Forest.

Expenses in wildfire suppression were \$10,000,000 for Impassable Bay Complex, \$900,000 for Ocean Bay Fire, and \$25,000 for Terrapin Bay Fire. The Terrapin Bay Fire was contained during initial attack. Impassable Bay Complex was not contained during initial attack due to the remote location and difficult terrain (i.e., swamp). Ocean Bay was contained within 48 hours of ignition but with its occurrence in a Wilderness Study Area and due to a high density of snags from previous wildfires, options for direct attack and interior strip fires to maintain a low duration and cost of the fire, was very limited. All three fires started from unplanned natural ignition and were included in burn plans. These fires were in the CFLRP area and met fuel reduction objectives identified in burn plans. There were approximately 40 additional wildfires that were contained during initial attack amounting to small acreages. One fire of special note tested a fuel treatment area funded by CFLRP. This fire resulted from a single lightning strike in an area along US Highway 90 near Olustee. A major highway running generally parallel to the forest boundary was only 300 feet away and could have been impacted by smoke had the area not been treated. This fire only burned an area of approximately 60 ft² and then went out due to lack of fuel.

10. Temporary roads status

Number of miles of temporary road constructed in Fiscal Year 2011

17

Number of miles of temporary road decommissioned in Fiscal Year 2011

17

11. Describe any reasons that the FY 2011 annual report does not reflect your project proposal and work plan. Did you face any unexpected challenges this year that caused you to change what was outlined in your proposal? (please limit answer to two pages)

¹⁴ This metric is separate from the annual performance measurement reporting as recorded in the databases of record. Please see the instructions document for further clarification.

The FY 2011 work reflects our project proposal and work plan. The two greatest challenges this year were the CFLN funds not being distributed until the third quarter and our extended drought resulting in an active fire season. The combination and timing of these two issues greatly impacted our ability to conduct prescribed fire activities. Some of our projects are biologically time sensitive. This is the case with palmetto reduction, which requires the use of fire within 6 months post "chopping" to reduce fuels and enhance wildlife habitat through understory herbaceous restoration. If this chopping does not occur during the fall/winter then the window for opportunity to burn these areas within 6 months becomes much more limited, particularly in extreme drought such as that experienced this year. If CFLN money been distributed at the beginning of FY 2011, contracts could have been awarded and completed by the end of first quarter followed by prescribed burning during the peak of Florida's prescribed burning season. Another consequence of receiving CFLN funds late in the year may result in less competitive contract pricing normally assured through broad contract advertisement and opportunity for numerous bidders. Many contracts can only be performed by 8a contractors when late coming funds over-extend the capability of Contracting Officers and their support staff. While it is important to support small and disadvantaged businesses, it is also important to have contracts that maximize competitive pricing and the distribution of work. Late coming funds also stretch field staff capabilities during years of numerous, nationally significant wildfires, as was the case this year. With large-scale wildfires in Texas, Florida, New Mexico, Arizona, Virginia, and Georgia, fire-qualified staff whom normally complete CFLRP work or support contracting of that work (i.e., inspectors, contract officer representatives), were needed to support wildfire suppression. CFLN money received earlier in the fiscal year would help alleviate these conflicts that arise during the summer months. Despite these issues, target accomplishments fell in line with those projected and proposed fire treatment acres benefitted by a natural ignition occurring in a CFLRP treatment area proposed for prescribed burning this year. The natural ignition allowed fuels to be reduced in a manner consistent with those described in our CFLRP proposal while meeting the objectives in the respective burn plan.

12. Planned FY 2012 accomplishment narrative:

We are continuing to proceed at levels planned in our CFLRP proposal but with current continuing resolution reducing the ability to spend originally anticipated funds, some accomplishments may be reduced. If drought conditions persist and CFLN funds are released either late in the second quarter or after, treatments may be reduced.

13. Planned FY 2013 Accomplishments

¹⁵ Please include all relevant planned accomplishments, assuming that funding specified in the CFLRP project proposal for FY 2013 is available. Use actual planned funding if quantity is less than specified in CFLRP project work plan, and justify deviation from project work plan in question 15.

	Unit of measure	Planned	
Performance Measure Code ¹⁵	Offic of fileasure	Accomplishment	Amount (\$)
Number of stream crossings	Number	,	
constructed or reconstructed			
to provide for aquatic			
organism passage		0	
Miles of system trail	Miles		
maintained to standard		0	
Miles of system trail	Miles		
improved to standard		0	
Miles of property line	Miles		
marked/maintained to			
standard		0	
Acres of forestlands treated	Acres		
using timber sales		3,938	\$718,610
Volume of timber sold (CCF)	CCF	24,000	
Green tons from small	Green tons		
diameter and low value trees			
removed from NFS lands			
and made available for bio-			
energy production		0	
Acres of hazardous fuels	Acre		
treated outside the			
wildland/urban interface			
(WUI) to reduce the risk of			4
catastrophic wildland fire		49,300	\$1,584,500
Acres of wildland/urban	Acres		
interface (WUI) high priority			
hazardous fuels treated to			
reduce the risk of			4
catastrophic wildland fire		1,927	\$52,250
Number of priority acres	Acres		
treated annually for invasive		_	
species on Federal lands		0	
Number of priority acres	Acres		
treated annually for native			
pests on Federal lands		0	

14. Planned FY 2013 accomplishment narrative:

Work will continue as planned in the proposal assuming funding delays and reductions do not constitute a reduction in ability to complete time sensitive work. Biomass opportunities have been difficult to identify since no facilities have completed construction within the local area. We will continue to search for these opportunities in hopes of locating a market for biomass product. Site preparation will occur on 85 acres but is not in the table above for accomplished acres for reasons previously explained (Response to No. 7).

15. Describe and provide narrative justification if planned FY 2012/13 accomplishments and/or funding differs from CFLRP project work plan:

The number of roads identified for decommissioning in 2013 is currently lower than originally proposed due to a pending evaluation of our current motor-vehicle use and concern from the public that access for recreation may be impacted. Monies planned for these closures will be utilized to restore hydrology and accelerate herbaceous cover on those roads identified for closure.
