

Supplemental Map: Scenario 5 - current + 1.0°C

Probability that cutthroat trout hybridization exceeds 10% rainbow trout alleles (PRTA 10%)

The streams shown have been filtered as follows: slope <15%, summer flow >0.028 cms, and no NHD intermittent channels (FCODE=46003)
from: Climate, demography, and zoogeography predict admixture thresholds in salmonid hybrid zones in Rocky Mountain streams, M.K. Young, et al., 2016
