

Example Sustainable Operations Best Management Practices and Goals for Delegation of Authority Letters involving Fire Incidents

- 1) Incorporate sustainable operations best management practices in all incident management activities to minimize environmental, social and when possible, fiscal impacts without compromising firefighter and public safety or impeding incident operations.
- 2) Utilize on-site recycling services (accessed via the On-Site Incident Recycling BPA (preferred), an Emergency Equipment Rental Agreement, or through in-house personnel resources) to collect, sort, transport, and report on waste diversion rates throughout the incident.
- 3) Solicit feedback regarding sustainable operations occurring at incidents. Include sustainable operations information in after action reviews and closeout meetings.
- 4) Focus on promoting and implementing the following best management practices:
 - Championing of Sustainability: Insert language into the daily incident action plan, speak to sustainable operations during morning briefing, and post sustainable operations messaging at signboards throughout ICP.
 - Recycling: Utilize the on-site recycling services to collect, sort, transport, and report on waste diversion rates throughout the incident.
 - Encourage the use of reusable canteen/water bottles, portable water taps, and cubies.
 - When practical, utilize solar powered radio repeaters provided by NIFC.
 - Promote the use of rechargeable lithium ion batteries for radios.
 - Continue reuse and recycling at ICP supply caches.
