

## Aerial Retardant Use and Fire Information Summary 2012 to 2019

USDA Forest Service December 2020 (revised)

This document is a summary of data presented in the Biological Assessments and Supplemental Environmental Impact Statement of Aerial Delivery of Retardant on National Forest System Lands. It includes retardant use data and calculations using that data, as well as information from the FireStats database on number of fires and acres burned. The report is broken into sections identified by labels in the footer. The following index describes the sections.

| INDEX                 |  | Pages   |
|-----------------------|--|---------|
| Introduction          | Provides a description of this document and index of contents  | 1       |
| AppendixC             | Fire retardant use data from 2012 to 2019, and as presented in the 2011 EIS for 2000 to 2010, by unit and region including number of fires, estimated total number of retardant drops and average number per year, total gallons used and average gallons per year, impact acres at 4 and 8 gallons per acre coverage levels and percent of National Forest System lands impacted. | 2-11    |
| %LandCalculations     | Summary of calculations of acres and percent Forest Service land potentially impacted by aerial fire retardant at 4 and 8 gallons per hundred square feet application rates. Calculations are based on gallons used from 2012 to 2019 for average per year, total, and maximum gallons per unit.   | 12-15   |
| RetardantUseByForest  | Reported retardant use per year by forest and region, showing total from 2012 to 2019, average, frequency, minimum, maximum and estimated number of drops  | 16-17   |
| ImpactAcresInfo       | Explanation of how acres of impact were calculated   | 18      |
| ImpactAcres           | Summary of estimated range of acres impacted by unit and region from 2012 through 2019   | 19-24   |
| Region 1 Calculations | Calculations of estimated acres of impact for each unit in Region 1 by aircraft type and coverage level for total gallons of retardant used, average, minimum and maximum. There are also calculations for other agency aircraft used on fires.  | 25-27   |
| Region 2 Calculations | Calculations of estimated acres of impact for each unit in Region 2 by aircraft type and coverage level for total gallons of retardant used, average, minimum and maximum.   | 28-31   |
| Region 3 Calculations | Calculations of estimated acres of impact for each unit in Region 3 by aircraft type and coverage level for total gallons of retardant used, average, minimum and maximum.   | 32-35   |
| Region 4 Calculations | Calculations of estimated acres of impact for each unit in Region 4 by aircraft type and coverage level for total gallons of retardant used, average, minimum and maximum.   | 36-38   |
| Region 5 Calculations | Calculations of estimated acres of impact for each unit in Region 5 by aircraft type and coverage level for total gallons of retardant used, average, minimum and maximum.   | 39-44   |
| Region 6 Calculations | Calculations of estimated acres of impact for each unit in Region 6 by aircraft type and coverage level for total gallons of retardant used, average, minimum and maximum.   | 45-47   |
| Region 8 Calculations | Calculations of estimated acres of impact for each unit in Region 8 that used retardant by aircraft type and coverage level for total gallons of retardant used, average, minimum and maximum.   | 48-50   |
| Region 9 Calculations | Calculations of estimated acres of impact for each unit in Region 9 that used retardant by aircraft type and coverage level for total gallons of retardant used, average, minimum and maximum.   | 51-53   |
| ImpactAcresOld        | Calculations of estimated acres of impacts using methods from the 2011 EIS   | 54-56   |
| ACRESbyMONTH          | Table of acres burned by month for the period 2000 to 2019 by Region and month of fire start and charts for each region; tables and charts of acres burned by month of start date and year for each Region; tables and charts of Region 5 forests acres burned by month of start date for the period 2000-2019.  | 57-77   |
| PercentACRESbyMonth   | Table of percent of total acres burned by month for the period 2000 to 2019 by Region and month of fire start and charts for each region; tables and charts of percent of total acres burned by month of fire start and year for each Region; tables and charts of Region 5 forests percent of acres burned by month of fire start for the period 2000-2019.                       | 78-98   |
| NUMBERbyMONTH         | Table of number of fires by month for the period 2000 to 2019 by Region and month of fire start and charts for each region; tables and charts of number of fires by month of start date and year for each Region; tables and charts of Region 5 forests number of fires by month of start date for the period 2000-2019.   | 99-119  |
| PercentNUMBERbyMonth  | Table of percent of total number of fires by month for the period 2000 to 2019 by Region and month of fire start and charts for each region; tables and charts of percent of total number of fires by month of start date and year for each Region; tables and charts of Region 5 forests percent of total number of fires by month of start date for the period 2000-2019.        | 120-140 |

| Appendix C - Fire Retardant Use Information |                                     |           |                   |                   |                        |                         |                          |                          |                          |  |  |                       |

In the 2011 analysis, the estimate of acres impacted by retardant drops was calculated assuming that each drop results in even coverage. The results using this method are displayed later in this document with the footer ImpactAcresOld. Drop test data for aircraft on Forest Service contract (in table below) indicates that drops do not result in even coverage and are dependent on the type of aircraft. The 2011 analysis underestimated the total acres impacted.

Calculations of acres impacted that adjust for the coverage patterns are shown on the pages with the footers 'Region 1 Calculations', 'Region 2 Calculations', etc. These calculations present a range for each coverage level based on the minimum acres impacted and the maximum acres impacted. The ranges represent the best information available. They do not account for the overlap of drops when building a retardant line nor for when drops occur at coverage levels less than 4 gallons per 100 square feet. This method overestimates the acres impacted.

The sheets with the footer ImpactAcres summarizes the range of acres impacts for the time period 2012 to 2019 for each forest unit and each region for the total gallons of retardant used, the averaged used per year, the minimum use in any year, and the maximum used in any year.
