

Growing a Native Plant Program

Chequamegon-Nicolet National Forest

2005 Accomplishments

The Chequamegon-Nicolet National Forest launched a native plant program in 2005. Site preparation for native plant nurseries was completed at four of the Forest's administrative sites and at the Oconto River Seed Orchard. Custom-made signs were on display during this "transition period". The focus of this year's efforts was on seed collecting. A highly-skilled botanist devoted his entire summer to collecting native seed from the Forest's three seed zones. A wide array of species were collected, including bottlebrush grass (*Elymus hystrix*), Canada wild rye (*Elymus canadensis*), wild bergamot (*Monarda fistulosa*), black-eyed susan (*Rudbeckia hirta*), early sunflower (*Heliopsis helianthoides*), columbine (*Aquilegia canadensis*), and swamp milkweed (*Asclepias incarnata*).

Native Plant Program NFN3 Project Status Report.

Project Name: *Developing a native seed source for Northern Wisconsin*
