

Natives for Fires Restoration

2009 Accomplishments

The Payette NF has maintained an active native plant materials program for over a decade. In 2009, the Forest continued to develop local contracts with Buffalo Berry to propagate native shrubs on an annual basis.

Locally grown plants used in restoration implementation included: red-osier dogwood, mountain spirea, silky lupine, and other perennials.

Local volunteers, students, and YCC crews collected seed and planted native shrubs. Using native plant material dollars and other fire funds, approximately, 20,000 shrubs were planted in FY 2009 on the East Zone Complex, Cascade Complex, and Grays Creek Fires.

Year Awarded: 2009

Project completion: 2012

Report number: 1 of 1

Expenditures:

- FY09 funding \$45,000
- FY09 spent. \$20,000

Partners: Buffalo Berry Farms
