

# Restoration and Invasive Species Education Cleveland National Forest

## 2010 Accomplishments

### Volunteer with Back to Natives on the Cleveland National Forest

Do you have some extra time on your hands this summer? Feel like spending some time outside, getting some exercise, hanging out with some interesting people? Back to Natives is working to remove three miles of non-native invasive weeds along the South Main Divide Road in the Cleveland National Forest, starting at Elsinore Peak and heading north toward Ortega Highway.

USFS and Back to Native Restoration Volunteer Training Program: The USFS & Back to Natives Restoration provides volunteer training on ecological restoration to provide for healthy ecosystems. The program is for volunteers interested in the restoration and conservation of wildlands. Successfully habitat restoration provides for native species protection while invasive, nonnative species are removed efficiently.

Year Awarded: 2010

Project completion: 2010

Report number: 3

Expenditures: FY2010, \$5,000

Partners/Contractors/Coop: Back to Natives Restoration Group
