

Native Plants for Watershed Restoration Payette National Forest

2012 Accomplishments

In 2009 the Payette National Forest was awarded Native Plant Material funding to collect local native seed to propagate genetically appropriate materials for restoration projects in the South Fork of the Salmon River and the East Fork of the Weiser River.

In 2012 seedlings of locally grown mountain alder, Sitka alder, serviceberry, red osier dogwood, black hawthorn, mockorange, golden current, wax current, prickly current, woods rose and white spirea were used to restore watersheds impacted by fires and flood.

Proud students smile for the camera.

Year Awarded: 2009

Report number: 4 of 6

Project completed: 2014

Expenditures to Date: \$12,517

Total Award: \$24,000

Partners:
