 RS: Regional Forester's Sensitive Plant

The McCormick Wilderness encompasses 17,164 acres in Baraga and Marquette Counties of Michigan's Upper Peninsula. A natural heritage grant was awarded by the Michigan Dept. of Natural Resources to the Ottawa National Forest to conduct rare plant surveys in the McCormick Wilderness during the summer of 2000. This checklist was prepared from these surveys. This project was made possible by citizens who contributed to the Nongame Wildlife Fund on the Michigan income tax form or by a direct

donation to the Fund. Special thanks to Steve W. Chadde, Contract Botanist.

The McCormick Wilderness is 12 miles north of Champion and 50 miles west of Marquette. The tract was used as a vacation retreat by three generations of McCormicks. The land was subsequently donated to the USDA Forest Service and became part of the National Wilderness Preservation System in 1987. Access to the southwest corner of the tract is by County Road 607. Access to the interior of the tract is limited. A 3-mile foot trail connects CR 607 with White Deer Lake. No motorized vehicles are permitted within the Wilderness.

Many plants are protected by Federal or Michigan laws (e.g., Endangered Species Act, Michigan Christmas Trees, Boughs, Plants, and other Trees Act) on both public and private lands. Please take only photographs when viewing plants on the Ottawa National Forest.
